ABOUT SMOKE ALARMS

Battery Operated Smoke Alarms:

Battery-operated Smoke Alarms should be installed in every room where people sleep. Battery-operated Smoke Alarms should not be used where power failures are common. Batteries should be replaced at least once a year or more often if the unit chimes (beeps) frequently. Batteries should never be painted over. If a smoke alarm sounds when people are not home, it is possible that the batteries are becoming weak. If any Smoke Alarm sounds, test the batteries or replace the batteries immediately. Smoke Alarms should be tested weekly. If the Smoke Alarm is not sounding at the right time, replace the batteries immediately. Smoke Alarms should be tested weekly. If the Smoke Alarm is not sounding at the right time, replace the batteries immediately.

INTERCONNECTED SMOKE ALARMS

Interconnected Smoke Alarms are Smoke Alarms that are wired together. This means that if the alarm in one room is triggered, all of the other Smoke Alarms in the house will also be triggered. Smoke Alarms can be interconnected using either hardwire or battery back-up. Interconnected Smoke Alarms can be powered by AC power only, or with an alternating current (AC) and a battery as a back-up. Interconnected Smoke Alarms are the preferred method of smoke detection in homes and businesses.

ABOUT SMOKE ALARMS

Hardwired Smoke Alarms:

Hardwired Smoke Alarms can be powered by AC power only or with an alternating current (AC) and a battery as a back-up. Hardwired Smoke Alarms are the preferred method of smoke detection in homes and businesses.
